

Instructions for Module 6C – Concepts of Modern Biology: Current Topics in Cellular Neurobiology

How to get your “Bonus Points”:

- Go to the list of dates / speakers on the seminar website. You will find reviews for all three major topics (indicated by “REV” in the filename) in addition to the original article covering your specific topic. Download all reviews and the original article you are to present.
- Check whether Supplementary Materials (text, figures, movies etc.) are available on the journal website of your specific original article and, if so, download them as well. (Note: You have to be inside the KIT network to download from the corresponding journal websites).
- Read and understand **all (!)** the reviews plus your original article together with its supplements. Use textbooks, the internet etc. and your brain to grasp the contents of the papers.
- Seek the help of your respective advisor in case you don't understand major points in the review covering your topic or in your specific original article.
- Prepare a 25min talk presenting the crucial data of the original article (and be prepared for a 20min discussion).
- Meet your advisor at least once for a final revision of your powerpoint presentation before delivering your talk (**obligatory!**).
- We expect all attendants to be prepared for all three introductory and all listening sessions by reading the respective reviews. You are expected to participate in the discussions.
- Maximally one third of the “Bonus Points” will be awarded for your presentation, maximally 1/3 for your understanding of your specific topic and maximally 1/3 for your contributions to the discussions.
- Attend all session of the seminar (otherwise bring a doctor's certificate).
- If you missed more than one seminar session you have to go to dentition in our institutional Journal Club (every Tuesday, 9:15am in room 102 100). One Journal Club counts for ½ seminar session.
